| Trustee | CIMB Islamic Trustee Berhad |
| Shariah Advisor | IBFIM |

Key Risks

5. What are the key risks associated with this product ?

| | |
|------------------------|---|
| Bond/Sukuk Issuer Risk | <p>This risk refers to the individual risk of the respective companies issuing the securities. Bond/Sukuk issuer risk includes, but is not limited to, changes in consumer taste and demand, legal suits, competitive operating environments, changing industry conditions and mistakes made by the management. If the performance of a company (invested by the Fund) deteriorates, the company's debt securities will decline in value and this in turn may suppress the NAV of the Fund. The deterioration of the performance also will affect the liquidity of sukuk. This risk can be minimised through diversification and by careful selection of debt securities/sukuk.</p> |
| Credit/Default Risk | <p>Sukuk issuers may default or reschedule their payment which may cause the NAV of the Fund to decline. This risk however can be mitigated by careful selection of sukuk. In any case, this Fund will invest only in sukuk rated at least "A" by RAM or its MARC equivalent.</p> |
| Interest rate risk | <p>Bond prices generally fall when interest rates rise and vice versa. The Fund's NAV may fall when interest rates rise or are expected to rise. This will also have an effect on the valuation of sukuk. This risk could cause the decline of the valuation for the sukuk, and vice versa. To mitigate this risk, the Investment Manager will manage the duration of investment in bond/sukuk. In times of rising interest rates, the duration will be shortened and vice versa.</p> <p>The above interest rate is a general indicator that will have an impact on the management of the fund regardless whether it is a Shariah-compliant fund or otherwise. It does not in any way suggest that a Shariah-compliant fund will invest in conventional financial instruments.</p> |
| Market Risk | <p>Investments in securities are always exposed to market risk. Market risk is the risk of negative movements that affect the price of all assets in a particular market.</p> <p>The factors influencing the performance of the markets include but are not limited to:</p> <ul style="list-style-type: none"> • economic and financial market conditions; • political change; • broad investors' sentiment; • movements in interest rates and inflation; • any factors which are beyond the reasonable control of the Manager or the Trustee; and • any other factors, causes or reasons which are referred to in the Deed. <p>Such movements in the underlying values of the securities/assets of the investment portfolio will cause the NAV or prices of units to fall as well as rise. The Manager will employ an active asset allocation management to reduce the risk.</p> |
| Liquidity risk | <p>Liquidity risk is defined as the ease with which a security can be sold at or near its fair value depending on the volume traded on the market. Generally if the security encounters a liquidity crunch, the security may need to be sold at a discount to the security's fair value. This in turn may depress the NAV growth of the Fund. For purposes of this Fund, the Investment Manager will attempt to balance the entire portfolio by</p> |

| | investing in a mix of assets with satisfactory trading volumes and those that could occasionally encounter poor liquidity. This is expected to reduce the risk for the entire portfolio without limiting the Fund's growth potential |

Comment on Fund Performance

For the financial year ended 31st August 2016, the Fund registered a 5.77% return compared to the benchmark return of 5.07%, thus outperformed the benchmark by 0.88%.

13. Portfolio Turnover Ratio

The Portfolio Turnover Ratio (PTR) indicates the frequency of turnover for a particular fund in any given calendar year. It is calculated by taking the average of acquisitions and disposal of securities divided by the average value of the Fund for the year calculated on a daily basis.

| Financial Year | 2016 | 2015 | 2014 |
|----------------|------------|------------|------------|
| PTR (time) | 0.54 times | 0.11 times | 0.60 times |

The PTR was higher for the FYE 31.8.2016 compared to previous year due to higher bond transactions during the period under review.

Basis of calculation for Portfolio Turnover Ratio

Portfolio Turnover = $\frac{(\text{Total acquisition for the year} + \text{Total disposal for the year})}{2}$
Average value of the Fund for the year calculated on a daily basis
